

## The results are in!

A Defender exclusive, the Travel 503 with an upgraded 915Wh battery is a compelling choice for an inexpensive, fume-free, lightweight and easy-to-handle dinghy motor. Tested on a 2015 Achilles HB-FX Series HB-270FX with three people onboard, lifejackets, spare battery, and a “bag of stuff” to simulate a grocery run, the 503C ended the test trip with 70% of its original capacity.

Our high-capacity version of this popular electric motor took just 3 minutes longer than the Travel 1003C to complete the 1.5 mile full-throttle round trip at an average speed of 3.6 MPH. Where charging is a challenge, the 503C conserves battery life and extends your fun on the water.

## After the Test

*“503C is geared to draw less power and lasts a lot longer to help you cover more distance between charges! It’s easier to operate and will save a few dollars also. Cruisers and tender owners should really love this!”*

*-Brandon Flack*
