

PLANUS

Artic Plus Marine Toilet

Planus was born out of the in-depth experience gained by our staff over more than twenty years of collaboration with shipbuilders.

The basis of our knowledge is due to the continuous support we supply directly to the shipyards and on board. We are constantly adapting to the needs of our customers.

Planus electric marine toilets has recently been awarded the highest rating in its class among a field of stiff competition by Practical Sailor magazine.

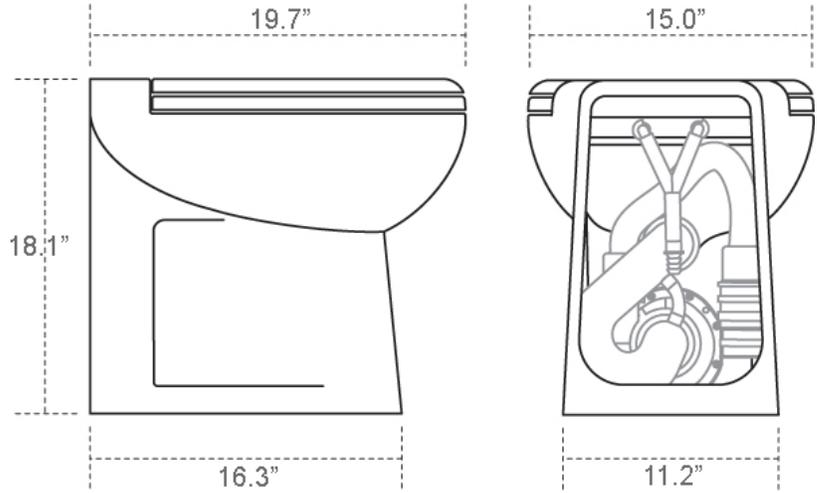

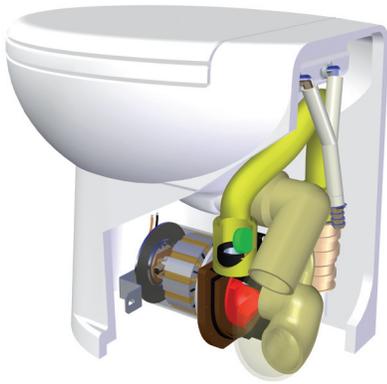

Control panel with 1 button

Easy to use with a simple push of the button to automatically flush. LED indicator will show when the tank is full when it is connected to the tank level sensor. Frame available in ivory or black.

Control panel with 2 buttons

This control panel leaves the bowl completely empty when not in use. The "Before Use" button must be pressed to fill the bowl ready to use. The "After Use" button causes the bowl to be flushed. LED indicator will show full tank.

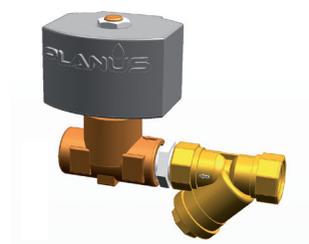

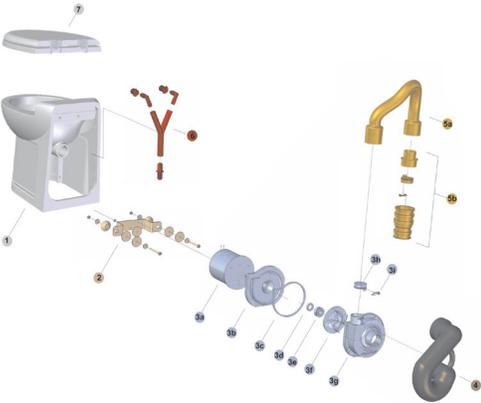

The high speed VORTEX pump and the geometric design of its piping create a great vacuum able to move water and organic waste from bowl.

Vertical discharge height = 29 feet
Horizontal discharge distance = 262 feet

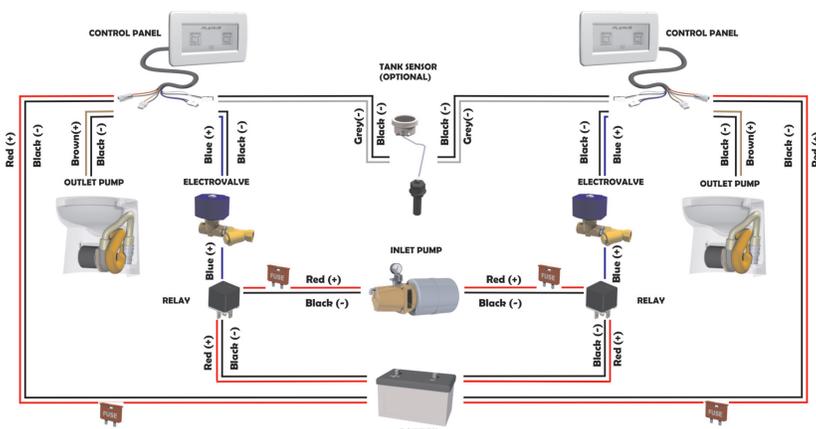

Important innovations make the PLANUS toilet even quieter than customers have come to expect.

Stainless Steel one-way valve shutter solves the inevitable problem of tiny deformations present in plastic-moulding components, which can damage its functionality. Plastic components can never be perfectly uniform across various production batches. The stainless steel shutter, on the other hand, ensures a perfectly level, hard wearing surface.

Electric solenoid water inlet valve

Sea water centralized system

Toilet flush system
Dripping water inlet for toilet flushing:
silent, reliable and effective.
