

TORQUEEDO

Electric mobility on the water

NORTH AMERICA **2021**

Rough seas make good sailors

There's an old seafaring proverb: some things are best learned in calm, and some in storm.

Global perspectives are changing as we deal with the disruption to lives and livelihoods caused by the coronavirus. It has reset priorities and shifted our focus toward building a more sustainable and healthier economic system with investments in renewable energy, electrification, efficiency, smart mobility and more resilient infrastructure. At Torqeedo, we are at the forefront of innovation, building products that will advance a green recovery that addresses the climate crisis.

Our goal is to make the switch to electric boating easy for boaters and boat builders alike. To accomplish that, we do more than just design systems that are socially, ecologically and economically advantageous. We build products which perform beautifully and drive the transition to climate-neutral mobility. We have built strong market leadership in the small outboard segment, and for the 2021 boating season,

Torqeedo will launch a lighter, more affordable Travel motor: the Travel 603 (p. 26). It's a 2 HP-equivalent, direct-drive outboard with a built-in lithium battery perfect for tenders, small sailboats, and other applications with suitable range requirements. The Travel 603 ships with a 500 Wh floating battery pack and all the high-tech features you expect from a genuine Torqeedo product. The best-selling Travel 1103 will continue as our class-leader for the small outboard segment.

The 20 HP-equivalent Cruise R outboard and fixed pod motors receive a technical update for the new boating season. These flagship products now ship with TorqLink (p. 31), a high-tech communications and control system initially developed for Deep Blue. Our new throttle with a vivid and colorful onboard display (p. 35) also has TorqLink built in to allow an easy connection to your TorqLink equipped drive system.

Thanks to our cooperation with ZF, two powerful new saildrives for Deep Blue (p. 44) are now available to our customers and boatbuilding partners. Deep Blue 100 i continues to transform recreational boating, and foiling technology is opening up more applications for zero-emission drive systems. As ever, we continue to focus on safety, reliability and performance as we create the future of how people move on the water.

These transformative times have proven that we can come together and rise to meet a challenge, and we must also act to reduce climate change. When you buy a Torqeedo product, you're doing more than purchasing a high-tech electric drive system from the market leader. You're part of a sustainable mobility transformation.

Welcome aboard.

Contents

8 Sustainability:

Your choices matter. This is how electric power makes boating better.

10 New mobility:

Professional applications of Torqeedo technology.

12 Superior performance:

Why we focus on overall efficiency, and how to measure it.

14 Advanced engineering:

Take a look inside the lab at how Torqeedo engineers develop our high-tech products.

New for 2021:

Travel 603 as silent direct drive with new 500 Wh floating battery

18 Ultralight

Powerful and ultra-stealthy, the Ultralight 1103 powers the pros of kayak angling.

24 Travel

What floats your boat? More power? Less weight? Travel motors give you options for dinghies and daysailers.

Update for 2021:

Cruise 10.0 R with TorqLink

28 Cruise outboards

Proven reliable electric outboards for applications between 5 and 20 HP equivalents.

36 Cruise batteries

The Power 24-3500 is the ultimate 24 V power supply for Cruise 2.0 motors or hotel loads. Power 48-5000 supplies Cruise 4.0 or 10.0 and all 48 V onboard needs.

Update for 2021:

Cruise 10.0 FP with TorqLink

32 Cruise Pod motors

See how quiet and eco-friendly Cruise pods can upgrade your sailing experience.

46 Deep Blue battery

The 40 kWh Deep Blue battery from BMW has what it takes to drive impressive performance.

New for 2021:

Deep Blue 50 SD and **Deep Blue 100 SD**

40 Deep Blue

Flexible and scalable, this perfectly integrated system is winning over yacht owners and commercial operators.

Filter by your interests

Turning the tide

Switching makes a difference. Electric boats are cleaner and healthier for you, your community and our planet

If you spend time outdoors and on the water, you are likely to have noticed a change. According to the NOAA* analysis of global temperatures, nine of the ten warmest years have occurred since 2005. The five hottest years since 1880, when record-keeping began, were the last five years. 2019 was the second-hottest year in the 140-year record. Ocean temperatures are rising, as fishermen report species that have sustained coastal communities for ages are vanishing. Coral reefs, so fragile and beautiful, so critical for aquatic life, are suffering from warming and ocean acidification.

The science is clear

Global temperatures are currently predicted to reach 1.5° C above pre-industrial levels between 2030-2052. The science is clear: We have to reduce our greenhouse gas emissions by 45% over the next 11 years to avoid further warming – and the most harmful impacts of climate change. Reaching this goal will require the reinvention of our lifestyle.

The good news is that the technology for a carbon-neutral mobility is here – and getting more powerful every day.

Electric boats have lower climate impact

Boats powered by electric motors have a significantly lower climate impact than combustion-powered boats. Even when charged with electricity from a coal-fired power plant, CO₂ emissions are reduced by approximately 30%. When charged via renewables, the climate impact is reduced by up to 90%.

Until recently, little attention was paid to the air pollution caused by combustion engines on boats. They are allowed to emit up to 100 times the level of harmful substances permitted in automotive diesels and include very little technology for filtering out pollutants. If you drive an 80 HP boat for one hour, it's like driving 350 new cars at highway speed for the same amount of time.** It's no wonder that

in cities with a lot of boat traffic, air pollution from fine particles is up to 20 times higher than accepted levels. If you switch to an electric drive, you are not only reducing your carbon footprint; your local community and waters will benefit as well.

Electric boats cause no water pollution because they don't discharge their exhaust underwater like combustion engines and there is no chance of fuel or oil spilling on the boat or fouling the water. They are also quieter than fossil fuel-powered boats, as their noise disturbs people on land and wildlife under water. With an electric motor the only sound you hear are the sounds of nature.

For now and the future

Boaters are keen to preserve nature and enjoy clean air and unpolluted water – for today's enjoyment and tomorrow's generations. Torqeedo creates the products for the transition to sustainable boating. It's what we've been doing all along.

* National Oceanic and Atmospheric Administration

** Sources: United States Environmental Protection Agency, California Air Resources Board, Environmental Capital Group

Zero pollution

Even a drop of spilled fuel can contaminate thousands of gallons of water. Electric drives eliminate the oily film that forms where combustion engines are used.

Peace and quiet

Electric motors are quieter and cause less vibration on board than a typical combustion engine.

Healthier air and climate

Electric motors do not emit toxic substances and typically have a lower carbon footprint due to their superior efficiency and lightweight design.

Abundant green power

Solar panels can help keep batteries charged and some electric motors can charge their own batteries - the spinning prop acts as a hydrogenerator and supplies free, clean energy while the boat is under sail.

More energy onboard

With increased battery capacity, everything from the water maker to the tender can be electric-powered, further reducing climate impacts.

Convenient charging

Charging is quick and easy - most marinas are already equipped with shore power connections.

Charting a new course

Digitalization, electrification and autonomous vehicles are changing how we get around. Torqeedo is bringing new mobility onto the water - and you can profit from the new technology

How we move people and products - in fact, our entire mobility culture - is changing. Today, we navigate the ever more complex urban infrastructure with our smartphones, changing from rent-a-bike to Uber pool to subway travel in an instant. Digitalization and connectivity are driving a mobility revolution not seen since the advent of combustion engines.

Waterways as a way out

These new, smart and interconnected mobility services are also extending onto the water. By 2050, the global population is projected to reach 10 billion,

with 75% of people living in cities. Facing this rapid population shift and the resulting gridlock of land-based transportation, urban planners are looking to the waterways that grace many metropolises to ease the burden on the road and rail infrastructure.

Many old canals and rivers that had been covered by concrete for decades are being reopened and integrated into public transport networks. Eight all-electric commuter ferries are operating in Bangkok, Thailand, powered by twin Torqeedo Cruise 10.0 electric outboards. Electric ferries are contributing to cleaner air in metropolitan areas and lowering the carbon footprint of on-water transport. Com-

mercial vessels cover their roofs and sunlit surfaces with solar panels to generate energy and reduce pollution, or even go completely emission-free.

Because of the focus on building a climate-neutral economy, electric mobility is growing exponentially year after year.

A smart business choice

The mobility revolution goes beyond exchanging motors; the whole operational system is being reprogrammed. Amsterdam is the first large city to have started trials of autonomous transport

Sun Concept is now in serial production of these 100% solar-powered 12-meter-long catamarans with twin Deep Blue motors. The Cat 12.0 can be configured as a 42-passenger commercial vessel or a recreational yacht.

boats for goods distribution. On urban canals or rivers we will soon see autonomous ferries or water taxis that can be ordered by smartphone. As 21st-century technology shouldn't be powered by 20th-century engines, electric motors are the propulsion technology of choice for this new application field. Smart, connected electric mobility means the world's great cities can improve their air and water quality, protect the climate, and simultaneously improve their citizens' quality of life. We're proud to be part of this global transformation. But the switch to electric is also a smart business choice: reduce operating costs, improve the user experience and minimize your carbon footprint,

while setting your company apart. Powering your business with environmentally friendly drive systems from Torqeedo may even provide a competitive advantage for funding, official permits and customers in the marketplace.

Torqeedo's
commercial
products**

XOCEAN's XO-450 USV is a custom-designed composite wave-piercing catamaran about the length of a typical automobile. The lightweight vessel is powered by a pair of Torqeedo Cruise 2.0 electric pod drives. Solar panels on deck provide efficient recharging.

Now is the time

Torqeedo provides a complete, integrated and proven electric propulsion system for your commercial project. With a battery capacity warranty of up to nine years and worldwide service, now is the time to lower your operating costs and carbon footprint with a high-tech electric mobility system from Torqeedo.

It all adds up

- Save 100% of your gasoline or diesel costs and instead:
- + Spend a fraction on electricity and battery write-off
 - + Reduce maintenance costs
 - + Enjoy high reliability

= If you're out on the water 100 days a year or more, you may save money by going electric.

What we offer

Diagnostics and service: Torqeedo specialists can solve many hardware and software issues remotely.

Experts on call to answer questions or schedule service.

On-site support: A Torqeedo technician will arrive at your place of business within 18-48 hours.

We'll be pleased to provide you with a calculation customized to your requirements:

usa@torqeedo.com

Superior efficiency and performance

Our focus on optimizing propulsive power and overall efficiency

Measuring power and performance

The most meaningful performance indicator of a drive system is propulsive power, which indicates the power delivered by the motor to drive the boat, while taking all losses, including propeller losses, into account. This method has been used in commercial shipbuilding for nearly 100 years.

Manufacturers of combustion engines often advertise less informative measurements, such as the shaft power, input power, or even the static thrust. That wouldn't be so bad if the differences between power ratings were minimal, but that isn't the case: a gasoline outboard with an advertised shaft power of 5 HP actually provides a mere 1.4 HP of propulsive power.

The efficiency advantage

Torqeedo efficiency ratings not only refer to motor efficiency, but also disclose losses in motor, electronics, cables, gears and propellers. Thanks to our focus on optimizing the entire system, Torqeedo motors deliver the highest overall efficiency on the market. When combustion engines burn gasoline or diesel, they primarily use the stored energy to produce heat: 5-15% of the supplied energy is used to propel the boat and the rest is lost due to inefficiencies. A Torqeedo drive converts between 44% and 56% of the available energy into propulsive power, extending range and runtime. Our Travel motor can propel a light boat more than 10 nautical miles and only consume the equivalent of 40 g of gasoline.

Input power: A performance indicator used for electric motors that doesn't take system losses into account.

Shaft power: A power rating used for combustion engines that doesn't take propeller losses into account, which can be anywhere from 20% to 75% of total power.

Propulsive power: The performance indicator used by commercial ships and by Torqeedo, which takes all losses into account and indicates actual power delivered.

Horsepower equivalent

Electric motors can achieve the same propulsive power as combustion engines with a significantly lower shaft power because of the different torque curves they produce. Electric motors deliver ample torque, which is available at any rotational speed. This characteristic allows them to turn large, efficient, high-pitch propellers that would cause an equivalent combustion engine to stall at startup. At Torqeedo, we always compare the actual propulsive power of our motors with gasoline engines. A Torqeedo motor specified as a "5 HP equivalent" provides the same power as a 5 HP combustion engine, even though its shaft and input power may be lower.

Convenience and value

What to expect when you switch to electric

Charging and handling are easy

An electric drive may simplify your onboard routines. Although charging batteries takes time, Torqeedo owners appreciate the simplicity of just plugging in at the end of the day - no need to find a fuel station or carry cans of fuel down the dock. Owners of Travel or Ultralight systems can charge on board via a 12/24 V supply or the Sunfold 50 solar panel, or bring the lightweight, portable lithium battery home to charge it using the mains charger that is supplied. Cruise and Deep Blue-powered boats plug in to shore power and charge overnight. Need a faster turnaround? The high-capacity batteries from these systems can also be equipped with fast chargers or multiple chargers.

Lightweight electric motors are also very easy to handle and store. Our best-selling Travel motors for dinghies, tenders and small sailboats start at just 34 lbs, including the battery. Motor, battery and tiller also come apart so one piece can be handled at a time. They never leak or stink so your hands and your boat stay clean.

The economics of electric mobility on the water

In recreational boating today, cleaner and more convenient electric propulsion systems demand a price premium. Depending on the frequency of use, this may be offset by lower operating costs and lower maintenance and winterization costs. Torqeedo offers full transparency on costs on its website. If you have any questions, please don't hesitate to contact us or your nearest Torqeedo dealer.

In commercial applications, electric mobility is often not only ecologically but also economically superior. Thanks to the substantially lower operating costs, electric propulsion systems often offer a lower total cost of ownership and help commercial operations improve their financial performance. Contact us to find out whether electric mobility will be economical for you.

Advanced engineering

No other electric boat motor manufacturer boasts such in-depth systems development, as many patents, or as much capacity for innovation as Torqeedo

Optimized components

A high-performance system requires high-performance components. Torqeedo employs in-house industrial engineering for all technologies required for electric mobility. All components are either developed by us or carefully selected to complete our systems.

A poorly designed propeller may only deliver 20% propeller efficiency, yet an outstanding one, up to 75%. Torqeedo propellers are perfected over several thousand iterations by the same methods as those used when developing propellers for commercial ships and submarines. But that is not all: the

12% of Torqeedo's turnover invested in research and development every year - a Silicon Valley level.

24,000 calculations

per millisecond performed by the processor in the Torqeedo Travel 1103 motor. The computing power significantly improves motor response.

propeller needs to be matched to the motor gear and the requirements of the application, a process known as drive train engineering. When combined with automotive-grade batteries and bespoke electronics and controls, you get superb building blocks for electric propulsion. But it's not a Torqeedo system yet.

We still have to achieve an intelligent interaction between the individual components and create a system that is safe, does its job and delights the user. Only then will we have created a true Torqeedo product. This systems-based approach is at the center of everything we do.

Seamless integration

Our software engineers ensure that all the high-tech features of Torqeedo's motors, such as real-time range calculations, smartphone integrations, adaptive charging and battery safety protocols, work properly. Coding and testing can account for more than 50% of the development work for today's electric propulsion systems, depending on the system's complexity.

Torqeedo engineers develop data networks that allow different components to communicate with one another quickly and seamlessly. The system constantly exchanges status messages, integrates sensor data and evaluates the appropriate course of action in a matter of milliseconds. Software stops the motor if it senses an impact to the propeller and manages battery charging safely. All Torqeedo motors, even the smallest kayak motors, have a GPS receiver built in that constantly measures speed over ground. With speed data combined with how much power the motor is using, the displays show real-time range and runtime estimates. When linked to a smartphone, the range remaining can even be displayed as a dynamic ring on a map. You never need to worry whether you have enough energy left to get home.

Propeller testing: a well-designed propeller may reach 75% efficiency, a critical step in optimizing an electric drive train.

40 lab benches for endurance testing and certifying compliance with international standards located in the German Torqeedo headquarters alone.

Prepared to drive the future

The most complex Torqeedo systems for large yachts or commercial applications simply wouldn't work without precisely manufactured components and painstakingly programmed software. With these bigger and more complex applications and as the world leader in marine electric drives, it is our responsibility to drive innovation and system development to the next level.

That's why we put so much effort into the development and preproduction process - from planning and design to final testing. Torqeedo's quality management system is ISO 9001-certified with DNV-GL and our 230 international patents for electric boating speak for themselves.

Torqeedo's EMC chamber: Measures electromagnetic compatibility and ensures norm conformity and reliability.

Deep Blue back-to-back testing

Besides rigorous endurance tests and electromagnetic compatibility testing, Torqeedo has 40 test benches in our German headquarters outside Munich. These benches perform comprehensive and long-term testing, as well as specific tests for gaining additional product- and project-specific approvals, thus achieving or surpassing the highest quality standards in the maritime sector.

230 international and multinational patents held by Torqeedo and covering all components and systems of electric boat motors.

Torqeedo has the **best efficiency levels** in the boat motor market.

Overall efficiency levels of various outboards

Clean mobility empowered by cutting-edge foiling tech

Torqueedo technology powers the America's Cup and hydrofoil technology makes electric boats go faster and further than ever before

Racing sailing revolutionized by hydrofoil technology

Foiling entered the world stage in 2012 with Emirates Team New Zealand's revolutionary AC72 yacht, *Aotearoa*. This "flying" sailboat utilized wing-like hydrofoils attached to the hull, a design which triggered a wave of foiling tech in racing sailing and continues to influence the marine industry as a whole. At first, hydrofoils slightly increase drag but as speed increases, they start to lift the boat out of the water. Once the resistance of the hull moving through the water is reduced, or even eliminated, the boat can go much faster - and needs far less energy. Prior to the use of hydrofoils, the average America's Cup sailing speed hovered around 10 knots. Now it is over 40 knots.

Power 48-5000

Torqueedo powers America's Cup foiling cant system

In the 36th America's Cup, a Power 48-5000 battery powers the AC75's foiling cant system, which controls the 40-ton hydraulic cylinders that position the composite foil arms and wings. While racing, the system controls speed, lift and stability, and ultimately the safety of the yacht and its crew. In 2021, all competing yachts are fitted with the same system. It is a great pleasure for Torqueedo to be working so closely with the engineers and designers responsible for building the most technologically advanced boats on the planet. We will proudly be watching the races in New Zealand, rooting for our respective teams and for Torqueedo.

From racing sailing to clean motorboats

Building on the experience from cutting-edge racing sailing, foiling technology is progressing quickly and is now available for sustainable motorboating. In combination with lightweight lithium battery technology, foiling electric motorboats can meet most owners' speed and range requirements and will transform recreational and commercial boat-

ing over the next few years. It's already happening: 2021 will see the continued success of foiling speedboats and the launch of innovative new electric foiling vessels powered by Torqueedo technology.

The Candela Seven, built by Candela Speed Boats in Sweden, is the world's first 100% electric hydrofoiling motorboat to enter serial production. Powered by a highly customized Deep Blue 50i motor and battery system, the carbon-fiber Candela Seven flies above the waves and water, delivering a quiet, smooth, fast and highly efficient ride.

Every innovation in foiling technology means larger, heavier boats like passenger ferries can partially foil, which increases efficiency and reduces their overall climate impact. At Torqueedo, we are dedicated to supporting the development of foiling technology, advanced hull design, cutting-edge green construction techniques and other developing technologies that will make our on-water experiences eco-friendly, safe and fun for years to come.

Hydrofoils substantially reduce drag compared to even the most efficient hull designs. Passive foils create lift and self-stabilize simply as a function of their shape. In contrast, active foils, like those used in these applications, use sophisticated flight controllers to vary lift and stability by adjusting the foils' angle of attack to the water for ultimate efficiency.

Ultralight

The Ultralight is the easy-to-mount solution for today's fishing kayaks

- + Range up to 33 miles
- + Weight as low as 19 lbs
- + Ultra-quiet direct drive (1103 AC)
- + Easy to mount on fishing kayaks
- + Superb usability with a wealth of smart features

As tested on a fishing kayak

Ultralight 403 AC	Ultralight 1103 AC
5.2 mph - 2:15 hr	6.2 mph - 0:50 hr
4.0 mph - 7:23 hr	4.0 mph - 5:44 hr
2.0 mph - 29:30 hr	2.0 mph - 28:36 hr

Kayaks
Canoes
Very light boats

Less fuss, more fish

The Ultralight 403 and 1103 not only take you where the fish are; they deliver hands-free kayak fishing, making them the preferred choice of professional anglers for years now. With a durable, practical and versatile mount for fishing kayaks, the Ultralights allow kayakers to go farther and fish longer, with motors that are **easier to mount, easier to use and faster to store and stow.**

Anglers can choose the motor power that fits their needs, their kayak and their waterways: either the extremely lightweight and efficient Ultralight 403 or the professional-grade, 3 HP-equivalent Ultralight 1103 AC. Both motors come with a mounting system that offers a host of practical features, including easy motor

depth adjustment and a lightning-fast way to safely stow the motor for transport (Ultralight 403) or remove it altogether (Ultralight 1103). Simply pull and secure a line to tilt the motor up when fishing in shallow waters or near the shoreline. The reverse lock line allows the motor to be locked down for motoring in reverse (see description below) and then released so the automatic kick-up feature is activated again. Integration with the kayak's steering system is quick and easy, and the onboard computer delivers real-time range and run-time data. Both Ultralights include a magnetic kill switch, which automatically cuts the power if the kayak capsizes.

Raising, locking and parking the smart way

No problem with obstacles

The mount allows the motor to kick up toward the stern of the kayak when it encounters an underwater obstacle, thus minimizing damage.

Reversing with one simple action

Pull the reverse cord and simply hold tension or secure it in the included cleat. Release the cord when moving forward to enable the automatic kick-up feature.

Handy park position

Safely stowing the Ultralight 403 for transport is quick and easy. Simply pull up and secure with the included elastic cord. To transport the Ultralight 1103, use the quick-release to remove the motor and stow.

Ultra-powerful. Ultra-efficient. Ultra-stealthy. The Ultralight 1103 AC

Professional kayak anglers don't hit the water without their Ultralight, and neither should you. With the Ultralight 1103 AC, you can beat the crowd and get to that coveted spot more than 30% faster. The whisper-quiet, direct-drive Ultralight 1103 AC comes with the **innovative angler mount** and all the high-tech features you've come to expect: GPS built in, real-time range and runtime display, solar charging, superior safety and performance, and the latest lithium battery technology. The 1103 AC is almost three times more powerful than the Ultralight 403 for the ultimate in acceleration and pulling power, and adds instant throttle response for improved maneuverability and a heavy-duty construction with more resistance to impact damage.

Ultralight 1103 AC

Ultralight 403 A/AC

Mounting, control and charging accessories

Like all products from Torqeedo, Ultralight motors are offered with a full suite of high-tech accessories. Add a **spare battery** for a quick and simple way to extend range. An optional cable connection with a built-in Bluetooth module transmits all relevant boating and positioning data to the **Torqeedo TorqTrac app**.

TorqTrac App

A summary of the Ultralight accessories can be found starting on page 50 or online at www.torqeedo.com

Motor accessories

Like all products from Torqeedo, Travel motors are offered with a full suite of high-tech accessories. It's easy to add a **spare battery or a remote throttle** for operating the motor from the helm instead of the tiller, or choose the **TorqTrac smartphone app**. With the optional Bluetooth dongle installed, TorqTrac turns your compatible smartphone into a bright, easy-to-read onboard computer with a number of useful motor and battery readouts. The app is available from the App Store (iOS) or Google Play Store (Android).

The convenient Travel bag set protects the motor, tiller and accessories and includes a separate, easy-to-carry battery bag. Further details can be found online at www.torqeedo.com or on page 50.

Optional USB adapter

What's inside your battery (and why it matters)

Battery cell type might be the most important factor when selecting an electric outboard. Travel batteries use high-quality, individually welded, cylindrical steel safety cells equipped with multiple safety mechanisms made by the world's most reputable manufacturers. The battery is further protected with a built-in battery management system with redundant hardware backups for every safety-relevant function. Other cell types, such as inexpensive pouch cells, are susceptible to damage from heat, vibration and the repeated shocks common on boats. Consumer-grade pouch cells also offer less effective protection against short-circuiting and have a shorter overall service life.

High performance, speed and range

Dependent on factors such as type of boat, load, propeller and ambient conditions. Figures for speed and range are indicative only and are not a guarantee of performance.

Cruise outboards

Proven, reliable motors with upgraded lithium batteries are the ultimate power packs for sailing or motorboats.

- + Minimum weight with maximum performance
- + Onboard computer with GPS
- + Durable and extremely robust design
- + Effective corrosion protection for fresh and salt water
- + Extended range thanks to very high energy density batteries

3.7 mph - 7:00 hr	3.6 mph - 10:00 hr
with 1 x Power 48-5000	with 2 x Power 48-5000

Fuel-free, durable, and perfectly integrated

Since their premiere in 2006, Cruise motors have been delighting users with power requirements between 5 and 20 HP equivalents. The outboard motor of choice for motorboats, dinghies and commercial users, the two smaller units (below left, 5 HP/8 HP equivalents) come with a choice of a tiller or an electronic throttle lever and can be fitted quickly and easily with minimal tools. Cruise motors have a **built-in GPS with on-board computer and display** of information such as speed and input power, state of charge and remaining range, even with third-party batteries. They have a **robust, wear-resistant**

design thanks to features such as a housing that is waterproof to IP67, pylons made from marine-grade aluminum and a specially reinforced fin. They team up with the purpose-developed propellers and additional Torqeedo components to create a highly impressive package.

The flagship remote outboard model in the Cruise series (20 HP equivalent) received a technical update for the 2021 boating season. A new standard feature is Torqeedo's advanced communication system, TorqLink, which allows faster and more accurate data sharing between system components.

Cruise 2.0/4.0 T

Cruise 2.0/4.0 R

Cruise 10.0 T

Cruise 10.0 R

Motor accessories

Like all products from Torqeedo, the Cruise motors combine perfectly with the safest lithium batteries on the market today (see page 38) and a choice of **propellers** that deliver either more thrust or more top-end speed. **Premium throttles**, which come with built-in **Bluetooth** for easy integration with the **TorqTrac app**, are another standout accessory for the Cruise lineup.

The Torqeedo throttle controls are available for either side or top mounting. More information can be found on page 50 or online at www.torqeedo.com.

Introducing TorqLink

TorqLink is Torqeedo's advanced electronics communication system developed for Deep Blue and now available for select Cruise motors, throttles and Power 48-5000 batteries. All products marked TorqLink will communicate seamlessly at startup. A TorqLink Gateway (2217-00) allows you to include components without TorqLink in your system.

High performance, speed and range

Dependent on factors such as type of boat, load, propeller and ambient conditions. Figures for speed and range are indicative only and are not a guarantee of performance.

Cruise pod drives

Quiet and eco-friendly, lightweight Cruise pods free up space below deck and can charge their own batteries while under sail.

Sailboats up to 10 tons
Commercial application up to 10 tons

- + Smaller and lighter than combustion saildrives
- + Virtually silent while in use

As tested on a daysailer

Cruise 2.0 FP	Cruise 4.0 FP
5.3 mph - 1:45 hr	7.0 mph - 1:10 hr
3.7 mph - 3:30 hr	4.7 mph - 5:20 hr
2.5 mph - 7:00 hr	3.5 mph - 15:00 hr
with 1 x Power 24-3500	with 1 x Power 48-5000

Long-lasting, robust and efficient

For sailboats up to 10 tons the advantages of electric pod motors are stunningly clear. Beautifully quiet and clean-running, Cruise pods deliver highly impressive performance and long range when paired with Torqeedo's lightweight lithium batteries (see page 38) and take up minimal space below deck.

The built-in GPS, onboard computer and display take all motor, battery and charging data into account and display them clearly, providing a perfectly harmonized drive system.

The flagship fixed pod model in the Cruise series (20 HP equivalent) received a technical refresh for the 2021 boating season. It now comes standard with Torqeedo's advanced communication system, TorqLink, which allows faster and more accurate data sharing between system components.

Introducing TorqLink

TorqLink is Torqeedo's advanced electronics communication system developed for Deep Blue and now available for select Cruise motors, premium throttles and Power 48-5000 batteries. All products marked TorqLink will communicate seamlessly at startup. A TorqLink Gateway (2217-00) allows you to include components without TorqLink in your system.

High performance, speed and range

Dependent on factors such as type of boat, load, propeller and ambient conditions. Figures for speed and range are indicative only and are not a guarantee of performance.

New TorqLink throttle with color display

With its bright, easy-to-read color display, this new throttle is the perfect control for your TorqLink-equipped Cruise 10.0 system. It displays all critical system data at the push of a button and boasts infinitely variable forward and reverse in a high-tech design. And it has Bluetooth built in for easy connection with TorqTrac, the Torpeedo smartphone app.

Superior battery technology

Safe, powerful and easy to use, Power batteries are the ultimate energy source for Cruise motors or hotel loads

Lithium-based batteries are the technology of choice for electric mobility applications. They store significantly more energy than all other batteries, maintain a high current (a major advantage for electric drive systems), do not lose their charging capacity, supply power reliably even in cold weather and have no memory effect. They also provide many more cycles than lead-based batteries.

Torqueedo has been a pioneer in the development of lithium batteries for marine applications for more than a decade. Since we make our batteries just a little bit better each year, we offer the most comprehensive and integrated protection and safety concept for lithium batteries on the market – coupled with performance and convenience.

Intelligent battery management system (BMS)

The BMS **monitors and protects** Torqueedo batteries against overcharging, overcurrent, deep discharge, short-circuiting and overheating. The battery has comprehensive safety features, and each safety-relevant component is duplicated with a backup component should it fail. In addition to these safety features, the BMS safeguards the battery's life expectancy with balancing and deep-sleep functionality.

Safe and easy to transport

Thanks to their **high energy density**, the volume and weight of lithium batteries are more than 70% lower than comparable AGM or lead-gel batteries. This makes our low-voltage batteries simple to handle and light to carry. On top of that, Torqueedo Power and Deep Blue batteries can be switched on and off, allowing them to be safely **transported and installed** and protecting them against unintentional discharge.

High-quality safety cells

Several hardware mechanisms in every single cell provide additional safety. Torqeedo only uses cells based on lithium (Li-NMC) sourced from the **clean, precision production processes** of reputable manufacturers. In the case of the Power 48-5000, the modules are produced by BMW i.

System communications

The battery electronics continuously communicates all the details of the battery status to the onboard computer.

Completely waterproof

Waterproof housing (IP67): While battery immersion should be avoided, all Torqeedo batteries are, without exception, completely waterproof. The waterproof characteristics of each battery are individually tested prior to delivery.

Waterproof connections: Whether connected or not, all cable connectors are completely waterproof to IP67.

Safety of lithium batteries

Besides performance, safety plays an important role for lithium batteries. In our view, five factors need to be considered in order to ensure that safe really means safe:

1. **Safe battery chemical engineering**, such as Li-NMC (lithium nickel manganese cobalt oxide).
2. **Safe cell packaging:** Torqeedo only uses individually welded safety cells – either steel cylindrical or assembled into modules and equipped with multiple safety mechanisms. Other forms of packaging offer a lower standard of safety as they afford less effective protection against short-circuiting within the cells.
3. **Clean, precision production processes** on the part of the cell manufacturers: Torqeedo only uses cells and modules sourced from the world's most reputable brands.
4. **Battery management system (BMS) with redundant safety features:** Unlike lead-based batteries, lithium batteries always need a BMS to perform balancing and safety functions. If any electronic components of the BMS fail, it may itself become a safety risk for the battery. That's why there is hardware backup for all safety-relevant components in Torqeedo batteries. Incidentally, this is also stipulated in the automotive and aerospace industries and for medical technology.
5. **Waterproof to IP67:** Water in lithium batteries can lead to various problems, such as corrosion of the BMS hardware or generation of electrolytic gas. Lithium batteries on board a boat should therefore be waterproof.

Power play

The 24 V Power 24-3500 delivers 3.5 kWh of power in just 55.8 lbs (25.3 kg) for an impressive energy density of 138 Wh/kg. With the 1,700 W fast charger, you can fill up the Power 24-3500 in just under two hours, making this lithium pack perfect for the Cruise 2.0 motor or powering hotel loads on board. For boats powered by Cruise 4.0 or 10.0 motors, choose the 48 V Power 48-5000 with TorqLink.

Power 24-3500

Head for the horizon with Cruise Hybrid

Cruise Hybrid systems provide economical, complete power for your 25- to 40-foot vessel up to 10 tons. Tried-and-tested Cruise motors are matched with high-performance lithium-ion batteries from Torqeedo's Power series, a variety of charging options and electronic throttles and displays - all connected with TorqLink, Torqeedo's advanced com-

munications protocol. Choose to view system data on your boat's NMEA 2000 multifunctional display, throttle display or directly on your smartphone with the TorqTrac app.

Charge your batteries from shore power with our standard or fast chargers, or harness the power of

the sun with a smart solar charge controller and your onboard photovoltaics. Sailboats can even charge their own batteries while sailing by simply placing the system in hydrogeneration mode. For seamless backup power you can integrate AC digital inverter generators up to 10 kW - just visit torqeedo.com for technical details.

New for
2021

Solar charge controller for Power 48-5000

This smart solar charge controller keeps your Cruise with TorqLink and Power batteries system charged via free, green solar energy. The integrated MPPT maximizes the energy yield of the solar modules during charging and eliminates passive losses by turning on the battery for charging only when solar power is available. Large solar arrays are now easy to integrate - simply connect up to six solar charge controllers in parallel with a peak input power of 325 W each.

Deep Blue

The only complete solution for powerful electric drive systems available on the market today - a fully integrated propulsion and energy management system.

25^{kw} 50^{kw} 100^{kw}

Yachts up to 120 feet
Large motorboats
Boats in nature reserves
Boats for commercial use, e.g.
water taxis, ferries and tour boats

- + Deep Blue is the electric drive system of choice for the world's most reputable boat brands
- + Motors up to 100 kW are available in a high-RPM version for planing boats and low RPM for displacement vessels
- + Upgraded 40 kWh batteries deliver the latest in automotive technology adapted for marine use
- + Sets industry standards for production quality and safety systems
- + Clean, renewable energy generation with automatic generator backup

The modular, scalable, single-source solution

More than just a battery-powered electric motor, Deep Blue is a fully integrated propulsion and energy management system - customizable with modular components and industrially engineered to meet the highest demands. The result is exceptional performance and safety, compliance with international standards at the system level and highly intuitive operation. This single-source turnkey solution is available as an outboard, inboard or saildrive for recreational boats and commercial applications.

Deep Blue system

The essential Deep Blue configuration is suitable for vessels with access to shore charging and a priority on propulsive power. The system components, from propeller to high-tech user interface, are perfectly matched and integrated to provide emission-free, quiet and powerful propulsion.

- 1 Powerful electric motor
- 2 360 V high-capacity lithium battery system
- 3 Shore power chargers
- 4 System management unit
- 5 Electronic throttle
- 6 Display with onboard computer

Deep Blue Hybrid system

This integrated, modular system is suitable for larger vessels, oceangoing yachts or commercial vessels with complex onboard energy requirements. Deep Blue Hybrid provides comprehensive energy management. Each component's energy demands are monitored and managed by the central system, ensuring economical collection and distribution of clean, renewable energy with automatic generator backup when necessary.

- 1 Powerful electric motor
- 2 360 V high-capacity lithium battery system
- 3 12 V batteries
- 4 Efficient state-of-the-art diesel generator
- 5 Shore power chargers
- 6 System management unit
- 7 Shore power connection
- 8 System connection box
- 9 AC inverter
- 10 Isolated AC power system (120/240 V AC current, 50/60 Hz)
- 11 Bi-directional DC/DC converter
- 12 24 V on-board batteries
- 13 Solar charge controller
- 14 Photovoltaic modules
- 15 Electronic throttle
- 16 Display with onboard computer

Always in control

Deep Blue offers intuitive operation presented on the multifunctional display, providing a complete overview of the entire system and access to all control functions.

The software keeps an eye on everything and prevents issues like deep-discharging batteries. An easy-to-understand graphical user interface is available as either multihull or monohull and delivers complete, up-to-the-minute system visualization.

Main menu: Navigate easily between different categories.

Drive screen: All important information needed while motoring. You can choose to display or hide the information line at the top.

System management: Provides status data on all system components. Select individual components for more detail.

Energy flow: Understand your system's power balance and energy flow at a glance.

Deep Blue for sailboats

When designing a new sailing yacht or contemplating a refit, each component must be evaluated to be sure it does its job, works well with the rest of the onboard systems and provides the best possible user experience. Deep Blue and Deep Blue Hybrid, with powerful electric motors available up to 100 kW, make yachting more convenient and more environmentally

friendly, while reducing dependence on shore supplies through onboard generation of clean, renewable power. Add in worldwide service, a 9-year limited battery warranty and the peace of mind that comes with choosing the world leader in electric mobility on the water and this choice couldn't be clearer.

Deep Blue 50/100 SD

Torqeedo now offers a new power range of electric saildrives, integrating the proven drive train technology of Deep Blue with saildrive legs from ZF. The quiet, emission-free fixed saildrives are reliable components for environmentally friendly bluewater sailing. Both saildrives are designed for sailing speeds up to 30 knots for high-performance sailing and efficient hydrogeneration, keeping your system charged while under sail. Deep Blue 50 SD easily mounts on Yanmar engine beds. Deep Blue 100 SD is a custom integration - contact us during your design-in phase.

Deep Blue for motorboats

25^{kw} **50^{kw}** **100^{kw}**

The first and only high-power electric drive system for motorboats from industrial production, Deep Blue offers exceptional performance, professional safety and easy operation. Motorboats and fast yacht tenders can choose from our high-tech outboard and inboard drives paired with high-capacity lithium batteries.

The 40 kWh battery is the ultimate standalone energy source. With a 9-year limited battery capacity warranty, outstanding efficiency and a proven long service life, Deep Blue is the exclusive solution for powerful electric motorboats.

Deep Blue 100i 2500

This 100 kW motor was specifically constructed to power fast, planing motorboats. With a reliable, low-maintenance, direct-drive design, the Deep Blue 100 i delivers extraordinary performance, with up to 2,700 RPM and a torque of 437 Nm.

The power of Deep Blue: High-capacity lithium batteries with technology by BMW i

Industry-leading energy density, the latest automotive technology and highest safety standards

BMW i high-capacity batteries are available for boats. This technology, proven in thousands of BMW's innovative i3 automobiles, has been integrated into the Deep Blue system by Torqeedo.

The latest generation of automotive battery cells:

- Very high energy density
- Prismatic cell design allows efficient cooling, a compact form, even temperature distribution within the battery and an extremely rugged structure
- Robust protective aluminum housing with safety vent
- From the automated production process of Samsung SDI, a leading manufacturer of lithium battery cells

Laser-welded cell connections:

Over a larger surface and therefore stronger and more powerful than conventional spot-welded cell connections.

Pressure safety disc: The battery is waterproof to IP67.

In the unlikely event of excess pressure developing in a cell, the prismatic cells will release the excess pressure through a valve. This is a significant safety advantage over foil-welded cells and pouch cells. The pressure safety disc allows gases to escape and ensures the battery stays waterproof in normal operation.

Automated module production:

- Prismatic cells have many advantages. However, they must be assembled extremely accurately in a very robust frame for a long service life. Otherwise, charging and discharging would, over time, lead to the cells expanding and collapsing very slightly and cause them to age prematurely.
- The fully automated module production at BMW in Dingolfing has set the standard in high-precision and extremely robust battery modules.
- The very rugged design is ideal for boat applications that place high demands on shock resistance.

Battery management system (BMS) at module and battery levels:

- State-of-the-art BMS technology
- Developed to ASIL C standards as used in the automotive industry for maximum safety
- Qualification and acceptance testing at a far higher level than is typical in the boating industry

Compressor cooling: Cools the battery to ensure high performance and a long service life, even in high ambient and water temperatures - in all climate zones anywhere in the world.

Power and data connections from the battery to the Deep Blue system

Professional safety standards

The **insulation monitor** constantly monitors that the voltage from all 360 V components is completely isolated from the boat - not just for individual system components but for all of them. If damage is detected, e.g. to the cable insulation, the system will issue an alert. In the event of dangerous insulation failure, the system will be shut down.

The **pilot line** monitors all 360 V cable connections on the Deep Blue. It will shut off the system immediately if it detects exposed high-voltage contacts in order to avoid any risk. Pilot lines have been mandatory for high-voltage equipment in other industries. They are not typically found in high-voltage, made-to-order boat drives.

Automotive industry-level battery safety: The first lithium batteries for the marine industry with the advanced quality standards of the automotive sector are the result of Torqeedo's collaboration with established battery manufacturers. Integrating a battery into a drive system and the associated safety concept alone requires considerable effort that can only be achieved by working together with the battery manufacturer.

All components are waterproof: Components that were not specifically developed for boats are not always waterproof. All the components of a high-power system on a boat must be waterproof to guarantee safe operation. That is why all of our components are waterproofed and, in some cases, are further protected by water sensors.

Battery venting: In the unlikely event that the redundant safety mechanisms of the battery fail, the battery cells can reduce their temperature and pressure via a pressure valve. While batteries are installed in electric cars in such a way that they can discharge battery gases directly onto the road, on electric boats the gases must be channelled safely off the vessel. We developed the first safe venting system for boats for the Deep Blue system.

Battery damping: All components on fast and seagoing boats are subject to constant high levels of shock that exceed shock levels on the road - in some cases over 12 g of acceleration force. The same holds true when trailering the boat. Since batteries and battery electronics are not designed for these constant impacts, they need their own damping system on boats (in addition to the damping mechanisms within the battery). Torqeedo is the only company in the world that provides this for maritime use.

The perfect powerhouse

Deep Blue battery

The latest battery technology from the BMW i3 series: high energy density, long service life, robust and built to the highest standards of quality and safety. With 40 kWh of usable capacity, the Deep Blue battery provides plenty of power for a full day on the water and paves the way for all sorts of new Deep Blue applications.

Technical data - Deep Blue battery

Nominal voltage	360 V
Max. continuous performance	55 kW
Capacity	40 kWh
Weight	613 lbs
Dimensions	65.4 x 38 x 6.9 inches

Integrate a range extender

Automatic and efficient backup power

Deep Blue makes it easy to manage your range extender for seamless backup power. AC generators up to 60 kW can be integrated into your Deep Blue energy management system or ultra-efficient DC generator input managed via the new DC interface for maximum comfort, convenience and safety. Check on your energy balance at a glance, set charging parameters, maintain state of charge or explore ultra-convenient options like Night Mode, which ensures batteries are fully charged by the time you specify. This allows you to enjoy all the comforts of your yacht at night without the noise and fumes of a running generator.

Deep Blue DC interface

Accessories

From bag sets to batteries, enhance your boating experience with Torqeedo accessories.

- + Add a spare battery for additional range
- + Charge via solar, 12 or 24 V onboard supply or plug in to shore power
- + Upgrade to a practical, ergonomic and Bluetooth-equipped throttle
- + Efficient propellers for high speed or more thrust

The full range of Torqeedo accessories is available at www.torqeedo.com

Controls and data integration

**Premium throttles
(top-mount twin as shown here)**

Our premium throttles offer the right solution for every application, whether for sailboats or on motorboats - ergonomic, strong and functional. All premium throttles come with Bluetooth built in for simple integration of Torqeedo's TorqTrac smartphone app.

Remote throttle

Instead of using the tiller, you can control your Travel or Cruise motor with the throttle located 5 ft or 16 ft away. This remote throttle comes with an onboard computer display, fully variable forward and reverse, and two different lengths of data cable.

NMEA 2000 gateway set

Link external devices to Torqeedo drive systems with TorqLink. The small gateway plugs in quickly and easily, and allows NMEA-2000 devices to access and display key motor and battery information.

Power supply

Spare Ultralight batteries

Extend your range with a second battery on board. Available in 320 Wh or 915 Wh capacity.

Spare Travel batteries

Extend your range with a second battery on board. Available in 500 Wh or 915 Wh capacity.

Power 24-3500

This 56 lbs 24 V lithium pack is perfect for the Cruise 2.0 motor or powering hotel loads on board.

Power 48-5000

For boats powered by Cruise 4.0 or 10.0 motors, choose the 48 V Power 48-5000. Now with TorqLink, fast charging and solar charging.

Charging

Sunfold 50

This lightweight solar panel delivers lots of clean solar energy and can be easily folded for storage. Suitable for all Travel and Ultralight batteries from 2015.

Solar charge controllers

The integrated MPPT controls solar charging, maximizing energy yield and overall efficiency for systems with Power batteries.

Fast chargers

Specifically developed for Power batteries, these fast chargers can fully charge a single battery in approximately two hours at 240 V.

USB adapter for Travel and Ultralight batteries

Charges small equipment such as smart-phones, cameras or onboard lights.

Propellers

Spare propeller

Choose a spare standard prop or a version with higher top-end speed or more thrust at low RPM.

Folding propellers for Cruise 2.0/4.0/10.0 FP

Low drag when under sail, powerful propulsion while motoring.

You can find more information about all our accessories and a detailed propeller guide on our website:

Part No.	Product	Description	MSRP in USD	Part No.	Product	Description	MSRP in USD
Drives and batteries							
Ultralight							
1405-00	Ultralight 403 A	Ultralight outboard, 1 HP equivalent, with 320 Wh high-performance lithium battery, including charger, throttle, onboard computer, GPS-based range calculation and emergency magnetic kill switch	\$ 1,799.00	1235-00	Cruise 2.0 TL	As part No. 1234-00, but with long shaft	\$ 3,999.00
1407-00	Ultralight 403 AC	Ultralight outboard, 1 HP equivalent, with 915 Wh high-performance lithium battery, including charger, throttle, onboard computer, GPS-based range calculation and emergency magnetic kill switch	\$ 2,299.00	1236-00	Cruise 4.0 TS	High-efficiency outboard, 8-9.9 HP equivalent, with tiller steering, integrated onboard computer with GPS-based range calculation, 4 AWG cable set (10 ft) including fuse, main switch and v20/p4000 propeller, short shaft version	\$ 4,499.00
1408-00	Ultralight 1103 AC	Ultralight outboard, 3 HP equivalent, with 915 Wh high-performance lithium battery, including charger, throttle, onboard computer, GPS-based range calculation and emergency magnetic kill switch	\$ 2,699.00	1237-00	Cruise 4.0 TL	As part No. 1236-00, but with long shaft	\$ 4,499.00
1416-00	Spare battery Ultralight 403 (A), 320 Wh	High-performance lithium battery with integrated GPS receiver, 320 Wh, 29.6 V, 11 Ah. For all Ultralight models (1404-00, 1405-00, 1406-00, 1407-00)	\$ 599.00	1230-00	Cruise 2.0 RS	High-efficiency outboard, 5-6 HP equivalent, including connection to remote steering, throttle, integrated onboard computer with GPS-based range calculation, 4 AWG cable set (10 ft) including fuse, main switch and v13/p4000 propeller, short shaft version	\$ 3,999.00
1417-00	Spare battery Ultralight models, 915 Wh	High-performance lithium battery with integrated GPS receiver, 915 Wh, 29.6 V, 31 Ah. For all Ultralight models	\$ 899.00	1231-00	Cruise 2.0 RL	As part No. 1230-00, but with long shaft	\$ 3,999.00
Travel							
1153-00	Travel 603 S NEW	High-efficiency outboard with integrated 500 Wh high-performance floating lithium battery, 2 HP equivalent, including onboard computer with GPS-based range calculation, charger, emergency magnetic kill switch, short shaft	\$ 1,999.00	1232-00	Cruise 4.0 RS	High-efficiency outboard, 8-9.9 HP equivalent, including connection to remote steering, throttle, integrated onboard computer with GPS-based range calculation, 4 AWG cable set (10 ft) including fuse, main switch and v20/p4000 propeller, short shaft version	\$ 4,499.00
1151-00	Travel 1103 CS	High-efficiency outboard with integrated 915 Wh high-performance lithium battery, 3 HP equivalent, including onboard computer with GPS-based range calculation and charger, emergency magnetic kill switch, short shaft	\$ 2,699.00	1233-00	Cruise 4.0 RL	As part No. 1232-00, but with long shaft	\$ 4,499.00
1152-00	Travel 1103 CL	As part No. 1151-00, but with long shaft	\$ 2,699.00	1240-20	Cruise 10.0 RS UPDATE	High-efficiency outboard, 20 HP equivalent, including connection to remote steering, 3/0 AWG, 14.8 ft including main switch and v22/p10k propeller, short shaft version. Throttle not included - best paired with TorqLink throttle part no. 1976-00	\$ 8,999.00
1155-00	Spare battery Travel models, 500 Wh NEW	High-performance floating lithium with integrated GPS receiver, 500 Wh 29.6 V. For Travel 503/603 models	\$ 699.00	1241-20	Cruise 10.0 RL UPDATE	As part No. 1240-20, but with long shaft	\$ 8,999.00
1148-00	Spare battery Travel models, 915 Wh	High-performance lithium battery with integrated GPS receiver, 915 Wh 29.6 V	\$ 999.00	1242-20	Cruise 10.0 RXL UPDATE	As part No. 1240-20, but with extra-long shaft	\$ 8,999.00
Cruise							
1234-00	Cruise 2.0 TS	High-efficiency outboard, 5-6 HP equivalent, with tiller steering, integrated onboard computer with GPS-based range calculation, 4 AWG cable set (10 ft) including fuse, main switch and v13/p4000 propeller, short shaft version	\$ 3,999.00	1243-20	Cruise 10.0 TS	High-efficiency outboard, 20 HP equivalent, with tiller steering, integrated onboard computer with GPS-based range calculation, 3/0 AWG, 14.8 ft including main switch and v22/p10k propeller, short shaft version	\$ 9,599.00
				1244-20	Cruise 10.0 TL	As part No. 1243-20, but with long shaft	\$ 9,599.00
				1245-20	Cruise 10.0 TXL	As part No. 1243-20, but with extra-long shaft	\$ 9,599.00
				1250-00	Cruise 2.0 FP	High-efficiency pod motor (fixed position), 5-6 HP equivalent, including throttle, integrated onboard computer with GPS-based range calculation, 4 AWG cable set (10 ft) including fuse, main switch and v13/p4000 propeller	\$ 4,549.00
				1251-00	Cruise 4.0 FP	High-efficiency pod motor, fixed position, 8-9.9 HP equivalent, including throttle, integrated onboard computer with GPS-based range calculation, 4 AWG cable set (10 ft) including fuse, main switch and v13/p4000 propeller	\$ 4,999.00
				1252-20	Cruise 10.0 FP UPDATE	High-efficiency pod motor (fixed position), 20 HP equivalent, including 3/0 AWG, 14.8 ft including main switch and v15/p10k propeller. Throttle not included - best paired with TorqLink throttle part no. 1976-00	\$ 8,999.00

Part No.	Product	Description	MSRP in USD
1905-00	Anode set Al Cruise 2.0/4.0 R/T/FP, Ultralight 1103 AC and Travel 603 and 1103 C	Anode for operating Cruise 2.0/4.0, Ultralight 1103 AC and Travel 603/1103 C models with standard propeller (with part No. 1915-00, 1916-00, 1923-00, 1933-00, 1953-00). Attachment to motor shaft made of aluminum for use in fresh water	\$ 34.99
1939-00	Anode set Zn Cruise 2.0/4.0 R/T/FP, Ultralight 1103 AC and Travel 603 and 1103 C	Anode for operating Cruise 2.0/4.0, Ultralight 1103 AC and Travel 603/1103 C models with standard propeller (with part No. 1915-00, 1916-00, 1923-00, 1933-00, 1953-00). Attachment to motor shaft made of zinc for use in salt water	\$ 29.00
1964-00	Anode set Al Cruise 2.0/4.0 FP with folding propeller	Anode set for Cruise 2.0/4.0 FP models with folding propeller (part No. 1962-00); consists of two ring anodes for attachment to the propeller and one anode for attachment to the pylon; made of aluminum for use in fresh water	\$ 69.00
1965-00	Anode set Zn Cruise 2.0/4.0 FP with folding propeller	As part No. 1964-00, but made of zinc for use in salt water	\$ 69.00
1935-00	Anode set Al Cruise 10.0 R/T	Anode set made of aluminum for use with Cruise 10.0 R/T in fresh water; consists of one shaft anode, two half-ring anodes and two ring anodes	\$ 99.00
1936-00	Anode set Zn Cruise 10.0 R/T	As part No. 1935-00, but made of zinc for use in salt water	\$ 99.00
1947-00	Anode set Al Cruise 10.0 FP with folding propeller	Anode set for Cruise 10.0 FP models with folding propeller (with part No. 1945-00); consists of two anodes for attachment to the propeller, two ring anodes and one anode for attachment to the pylon; made of aluminum for use in fresh water	\$ 129.00
1948-00	Anode set Zn Cruise 10.0 FP with folding propeller	As part No. 1947-00, but made of zinc for use in salt water	\$ 129.00

Power

2106-00	Power 24-3500	High-performance lithium battery, 3,507 Wh, rated voltage 25.2 V, weight 56 lbs, with innovative battery management system including numerous protective functions, waterproof to IP67; includes cable for communication with Cruise 2.0 and 4.0 systems	\$ 2,999.00
2104-00	Power 48-5000	High-performance TorqLink-ready lithium battery, 5,000 Wh, rated voltage 44.4 V, weight 82 lbs, with innovative battery management system incl. safety functions; waterproof to IP67; includes 3 ft data cable.	\$ 5,199.00

Part No.	Product	Description	MSRP in USD
Accessories			
Extras			
1925-00	Travel bags (2-piece)	For transporting / storing Travel models. Includes two bags, one for the motor (including tiller and accessories) and one for the battery.	\$ 229.00
1926-00	Travel battery bag	For transporting and storing Travel batteries	\$ 79.99
1977-00	USB adapter	USB adapter for charging USB devices from Travel or Ultralight batteries. For use only with batteries part No. 1146-00, 1147-00, 1148-00, 1155-00, 1416-00 and 1417-00	\$ 59.00
1931-00	Protective cover Travel	For Travel models. Protects the motor cable from UV fading and the shaft head from dirt. Water-resistant and breathable	\$ 74.99
1924-00	TorqTrac	Smartphone app for Travel, Cruise T/R as well as Ultralight models. Allows larger display of the onboard computer showing range on map and with many other benefits. Requires a Bluetooth Low Energy®-capable smartphone	\$ 149.00
2216-00	Venting adapter Power 48-5000	Ventilation adapter for installing Power 48-5000 in cabins or closed compartments	\$ 349.00

Charging equipment

1132-00	Sunfold 50	Foldable 50 W solar panel, convenient size, highly efficient, plug & play connections for waterproof charging of the Travel models and Ultralight 403 and 403 A/AC, only compatible with battery part No. 1146-00, 1147-00, 1148-00, 1155-00, 1416-00 and 1417-00	\$ 749.00
1133-00	Charger 90 W for Travel and Ultralight batteries	90 watt charger for electric sockets rated 100-240 V and 50-60 Hz. For use only with batteries part No. 1146-00, 1147-00, 1148-00, 1155-00, 1416-00 and 1417-00	\$ 129.99
1128-00	12/24 V charger cable for Travel and Ultralight 403	Allows the Travel models and the Ultralight 403, 403 A/AC to be charged from a 12/24 V power source	\$ 54.99
2213-00	Charger 650 W for Power 48-5000	TorqLink-ready charger current 13 A, charges the Power 48-5000 from 0% to 100% in a maximum of 10 hours; waterproof IP65	\$ 899.00
2206-20	Charger 350 W for Power 24-3500 (Power 26-104)	Charge current 10 A, charges the Power 24-3500 (Power 26-104) from 0 to 100% in a maximum of 11 hours; waterproof to IP65	\$ 599.00

Part No.	Product	Description	
2210-00	Fast charger 1700 W for Power 24-3500 (Power 26-104)	Charge current 60 A, charges the Power 24-3500 (Power 26-104) from 0 to 100% in < 2 hours; water-proof to IP65	\$ 1,999.00
2212-00	Fast charger 2900 W for Power 48-5000	TorqLink-ready charger current 50 A, charges the Power 48-5000 from 0 to 100% in < 2 hours; water-proof to IP65	\$ 2,199.00
2207-00	Solar charge controller for Power 24-3500 (Power 26-104)	Enables the Power 24-3500 (Power 26-104) to be charged with solar energy (solar modules not included). Integrated MPPT maximizes the energy yield of the solar modules during charging with very high level of efficiency. Maximum input power 232 W. For full specs visit torqeedo.com	\$ 499.00
2218-00	Solar charge controller for Power 48-5000 NEW	Enables the Power 48-5000 to be charged with solar energy (solar modules not included). Integrated MPPT maximizes the energy yield of the solar modules during charging with very high level of efficiency. Maximum input power 325 W. For full specs visit torqeedo.com	\$ 399.00
2211-00	Fast solar charge controller for Power 24-3500 (Power 26-104)	Enables the Power 24-3500 (Power 26-104) to be charged with solar energy (solar modules not included). Integrated MPPT maximizes the energy yield of the solar modules during charging with very high level of efficiency	\$ 1,299.00

Propellers and fins

1912-00	Spare propeller v10/p350	For Ultralight models, 403 and 403 A/AC (Ø 200 mm)	\$ 99.99
1972-00	Spare propeller v10/p1100	Standard propeller for Ultralight 1103, optional propeller for Travel 603/1103 C, weedless	\$ 99.99
1973-00	Spare propeller v10/p1100	Standard propeller for Travel 603/1103 C	\$ 99.99
1917-00	Spare propeller v9/p790	For models Travel 1003 (C) and Travel 503 from 2014 (Ø 292 mm)	\$ 99.99
1953-00	Spare propeller v30/p4000	High-speed propeller for Cruise 2.0/4.0 models manufactured from 2017 onwards: for planing with light boats (Ø 320 mm)	\$ 219.00
1954-00	Spare propeller v13/p4000	For Cruise 2.0/4.0 models manufactured from 2017 onwards: slower speed, greater thrust (Ø 300 mm)	\$ 109.00
1955-00	Spare propeller v20/p4000	For Cruise 2.0/4.0 models manufactured from 2017 onwards: faster, more efficient, weedless (Ø 300 mm)	\$ 109.00
1961-00	Spare propeller v22/p10k	For all Cruise 10.0 models: medium speed for planing and displacement	\$ 259.00
1962-00	Folding propeller v13/p4000	For use with Cruise 2.0/4.0 FP models on sailboats	\$ 899.00

Don't see your model prop here? See online prop guide:

<https://www.torqeedo.com/us/en-us/products/accessories/propellers-and-skegs>

Part No.	Product	Description	
1937-00	Spare propeller v15/p10k	For all Cruise 10.0 models and optimized for high thrust	\$ 259.00
1938-00	Spare propeller v32/p10k	Speed propeller for all Cruise 10.0 models and optimized for planing	\$ 259.00
1945-00	Folding propeller v15/p10k	For use with Cruise 10.0 FP model on sailboats	\$ 1,499.00
9234-00	Fin for Cruise R/T	Protects the outboard when running aground; for Cruise models with part No. 1209-00 to 1223-00	\$ 29.99
9258-00	Fin for Cruise R/T	Aluminum fin coated in polyurethane (PU) foam for Cruise models with part No. 1230-00 to 1237-00. Better protection when running aground	\$ 69.99
9259-00	Fin for Cruise 10.0 R/T	Protects the outboard when running aground	\$ 99.00

Cable, control, steering

1970-00	Ultralight kayak bracket	Optimized kayak mount for Ultralight models. For part No. 1404-00 to 1408-00	\$ 299.00
1976-00	TorqLink throttle with color display NEW	Top-mount throttle with color display for TorqLink/2021 Cruise 10.0 systems. Bluetooth and WLAN built in. Display shows all critical system info, GPS-based speed and remaining range. Includes a 3 m connecting cable	\$ 379.00
1918-00	Throttle for Travel models (spare part for Cruise and Ultralight models)	Enables operation with throttle instead of tillers for Travel models, including integrated display with information on battery status, GPS-based speed and remaining range calculation, including 5 ft and 16 ft connecting cables between motor and throttle. Can also be used as a spare part for Cruise 2.0 / 4.0 and Ultralight models	\$ 299.99
1921-00	Cable extension for throttle, 5 ft	Extension cable for Travel, Ultralight and Cruise models allows a greater distance between throttle / tiller and motor	\$ 34.99
1922-00	Cable extension for throttle, 16 ft	As part No. 1921-00, 16 ft length	\$ 49.99
1949-00	Throttle Sail side-mount	Side-mount electronic throttle for sailboats with TorqLink and TorqTrac built in. Includes cables, on/off button, emergency off button and 1.28" display	\$ 1,399.00
1950-00	Throttle side-mount	Side-mount electronic throttle for motorboats with power trim and tilt. TorqLink and TorqTrac built in. Includes cables, key switch, emergency off button and 1.28" display	\$ 1,399.00
1951-00	Throttle top-mount	Top-mount electronic throttle for motorboats with power trim and tilt. TorqLink and TorqTrac built in. Includes cables, key switch, emergency off button and 1.28" display	\$ 1,399.00

California customers: Warning applies to all products on page

Part No.	Product	Description	
1952-00	Dual throttle top-mount	Top-mount electronic throttle for twin-installation motorboats with power trim and tilt. TorqLink and TorqTrac built in. Includes cables, key switch, emergency off button and 1.28" display	\$ 1,699.00
1956-00	TorqLink 9.8 ft extension cable	TorqLink, 8-pin extension cable for a longer distance between the components. 9.8 ft long	\$ 89.00
1957-00	TorqLink 16 ft extension cable	As part No.1956-00, 16 ft long	\$ 99.00
1958-00	TorqLink 19.7 in extension cable, angled-end	90° angled-end extension cable for rigging in tight spaces. As part No.1956-00, 19.7 in long	\$ 69.00
1919-00	Long tiller arm	23.6 in tiller tube extension for all Travel and Cruise T models	\$ 69.99
1920-00	Motor cable extension for Travel and Ultralight	Cable connection extension between battery and motor for the models Ultralight 403, 403 A/AC and Travel models; allows a greater distance (6.5 ft) between battery and motor; waterproof plug connections	\$ 69.99
1204-00	Motor cable extension Cruise	Extension for Cruise cable set (between motor and battery), 6.5 ft long, with plug connector	\$ 129.99
1914-00	Emergency magnetic kill switch	Emergency stop key and immobilizer for Travel and Cruise T as well as part no. 1918-00.	\$ 29.99
1978-00	Emergency magnetic kill switch for TorqLink throttle NEW	Emergency stop key and immobilizer for part No. 1976-00, TorqLink throttle with color display	\$ 29.99
1927-00	Spare parts set Travel	Set for Travel consisting of emergency kill switch, battery attachment pin and steering fixing pin	\$ 49.99
1940-00	Cable bridges for AGM/gel batteries	Cable bridges for running Cruise 10.0 with AGM/gel batteries. Consists of four cables, 16 in, 2 AWG with post terminal connector	\$ 129.00
2217-00	TorqLink gateway set	Gateway allows communication and connection between products with and without TorqLink. Also controls Power 48-5000 battery banks. Includes on/off switch for Power 48-5000 and 16 ft extension cable	\$ 399.00
1966-00	NMEA 2000 gateway set	Allows NMEA-2000 devices to access and display key motor and battery information from TorqLink-equipped drive systems	\$ 349.00
2304-00	On/off switch for Power 24-3500 (Power 26-104)	Switch for activating/deactivating the Power 24-3500; waterproof to IP65, with LED on/off status display; required when the Power 24-3500 (Power 26-104) is used without a Cruise system	\$ 99.00
2215-00	On/off switch for Power 48-5000	Switch for activating/deactivating the Power 48-5000 when used without a Torqeedo motor	\$ 119.00

1974-00	Parallel bridge cable for Power 48-5000 NEW	Bridge cable, 8.7 in, 2 AWG with ring terminal connectors and M12 nuts for connecting two Power 48-5000 batteries in parallel	\$ 119.00
1934-00	Spare cable bridges Cruise models	Cable set for connecting two additional Power 24-3500 (Power 26-104) to a battery bank; includes one series bridge cable, 16 in, 2 AWG with post terminal connector, four parallel bridge cables, 16 in, 2 AWG with ring terminal connectors and M12 nuts, two data cables, 5 ft with waterproof data plug connectors	\$ 159.00
1975-00	Hybrid safety kit NEW	Disables the drive system while charging from shore power. Installation by boat builder or certified electrician; additional parts required	\$ 239.00

Torqeedo products are engineered and manufactured to the highest quality standards. Torqeedo motors and accessories are designed for long use in difficult conditions and must prove this in testing in continuous use. Every single product is carefully inspected before delivery. Certification to the internationally recognized quality management standard ISO 9001 is a guarantee of the quality of our products.
